6. Consumer barometer index													
1.2, -3.2, 4.2 and 5.3.													
Random sample ¹ balance	+14	+16	+7	+10	-1	-17	-24	-19	-8	-17	-17	-6	-5
Overall population 2 interval balance	+8	+10	+1	+4	-7	-22	-30	-25	-13	-23	-22	-11	-10
											-12		

¹ The balance is the difference between the positive (+) and negative (-) answers. Superlative answers, e.g. "significantly improved" or "got significantly worse", count double. This means that an extreme value of + or - 200 may be reached. The balance is understood to mean the index. An index value of 0 means an equal number of positive and negative answers. All figures are rounded up.

² With a 95% accuracy rate, the balance represents the overall population, i.e. all households in the given interval (confidence region). See Die Volkswirtschaft, issue no. 3, March 1980, pp. 174 ff. for the type of survey and the survey's bases
