

NONOMO® Move Motor

IMPORTANT: PRODUCT SAFETY NOTICE

We've discovered a design fault with the **Move Motor** previously supplied with NONOMO® swinging hammocks. There is a risk that, when the recommended 6 AA batteries are inserted, the battery compartment cover could come loose, allowing them to fall into the hammock below. In a worst case, the batteries may fall on the baby, which could cause serious injury.

IT'S PERFECTLY SAFE TO CARRY ON USING THE MOTOR , WITH THE BATTERIES REMOVED, ON POWER CABLE ONLY

You can still operate the motor using the power cable. If you haven't yet inserted batteries, your **Move Motor** is perfectly safe to use without them. If you have already inserted batteries, make sure you remove them before you next use your NONOMO® Swinging Hammock.

As the new owners of the NONOMO® company, QLEVR wants you to know we are doing everything in our power to put this right, and will provide you with a **repair free of charge** (please note it can take up to 4-6 weeks delivery time).

Only the Move Motor is affected. The hammock, stand and fixings are all still perfectly safe to use.

If you have any questions or want to organize the free shipment of your Move Motor to us for repair, please ask the manager of the shop for a free return label and contact details form or contact our NONOMO® customer team at repair@nonomo.de , and we'll try to get in touch with you within the next working day to arrange everything.
